## **Introduction: -**

This report provides a comprehensive overview of the University Contest Management System project, managed and executed using the Wrike platform. The project is part of the Software Project Management course, aimed at developing a system to facilitate the organization and management of university contests. The system is designed to streamline processes such as registration, scheduling, scoring, and result announcement, ensuring a seamless experience for both organizers and participants.

## **Objectives: -**

The primary objectives of the UCMS are to:

- Develop a user-friendly system for managing various university contests.
- Automate the registration process for participants.
- Streamline scheduling and coordination of events.
- Implement a scoring system that ensures fair and accurate results.
- Facilitate easy communication between organizers and participants.
- Generate real-time reports and analytics for event monitoring and evaluation.

## **Methodology: -**

The project was managed using the Wrike platform, which provided tools for task management, collaboration, and progress tracking. The Agile methodology was employed to ensure flexibility and iterative development.

### **Key Components of the Wrike Platform Used:**

- **Task Management:** Creating, assigning, and tracking tasks.
- **Collaboration Tools:** Enabling team communication and file sharing.
- **Gantt Charts:** Visualizing project timelines and dependencies.
- **Time Tracking:** Monitoring the time spent on various tasks.
- **Reporting:** Generating progress reports and analytics.

## **Project Phases and Milestones: -**

The project was divided into several phases, each with specific milestones:

### **Phase 1: Planning and Requirements Gathering**

- Objectives Defined: Clear objectives and goals were set.
- Requirements Documented: Detailed requirements were gathered from stakeholders.
- Initial Timeline Established: A project timeline with key milestones was created.

### **Phase 2: System Design**

- System Architecture: The overall system architecture was designed.
- UI/UX Design: User interface and experience were planned and wireframes were created.
- Database Design: The database schema was designed to handle contest data efficiently.

### **Phase 3: Development**

- Front-end Development: User interfaces were developed.
- Back-end Development: Server-side logic and database integration were implemented.
- Integration: Front-end and back-end components were integrated.

### **Phase 4: Testing**

- Unit Testing: Individual components were tested for functionality.
- Integration Testing: Integrated components were tested to ensure seamless operation.
- User Acceptance Testing (UAT): End-users tested the system to validate requirements.

### **Phase 5: Deployment**

- Deployment Preparation: Final adjustments and preparations for deployment.
- System Deployment: The system was deployed in a live environment.
- Training and Support: Training sessions were conducted for users, and support channels were established.

## Scope of the Project

The scope of UCMS includes:

- **User Management:** Registration and authentication for students, faculty, and administrators.
- **Contest Management:** Creation, scheduling, and management of contests.
- **Submission Handling:** Mechanisms for participants to submit their work and for evaluators to review it.
- **Evaluation and Results:** Tools for scoring submissions and publishing results.
- **Communication:** Features for announcements, notifications, and forums for discussions.

## Stakeholder Analysis

- **Students:** Participants in the contests.
- **Faculty:** Organizers and evaluators.
- **Administrators:** System managers and support staff.

## Before implementing an event management system, Problems we face:

There are several problems that the environment may face in the current event management process. Some of these problems include:

- **Manual and Time-Consuming Processes:** Event organizers often rely on manual methods for registration, advertising, and administration, leading to inefficiencies and errors.
- **Disorganized Information:** Scattered event information across multiple platforms results in confusion and miscommunication, making event management difficult.
- **Lack of Participant Engagement:** Without an integrated platform, keeping participants updated about event details is challenging, reducing attendance and satisfaction.
- **Limited Marketing Capabilities:** Traditional methods lack robust marketing tools, limiting event promotion and audience reach.
- **Inefficient Resource Allocation:** Without a streamlined system, organizers struggle with budget management, vendor coordination, and logistics, leading to wasted resources and higher costs.

## **Engineering Problem:**

The engineering problem is to develop an application that can streamline the event management process by consolidating registration, advertising, and administration in a single platform. The application must be easy to use and allow event organizers to manage multiple aspects of the event from one place, while also providing participants with a seamless registration process and easy access to event information.

## **Solutions:**

One possible solution is to develop an event management application that includes an admin panel for organizers to manage event details, such as advertising, timing, and winner announcements. The application would also include a user-friendly registration process and provide participants with access to event information and updates. To streamline the registration process, the application could use a centralized database to manage participant information securely. It could also include marketing features such as social media integration and email marketing tools to help promote the event and attract participants.

## **Motivation:**

The motivation behind developing an event management application is to simplify the event management process in universities because it's very difficult to Register Participants and Announce the location of event and timing to single Participant, it will reduce the burden on event organizers. By consolidating registration, advertising, and administration in one platform, the application would help organizers save time and resources while providing a better experience for participants. The application could also help promote events more effectively by making it easier to advertise and market them to a broader audience. Ultimately, the goal is to create a more efficient and effective event management process that benefits both organizers and participants.

## Some Output Images of Wrike where we manage our Project

This screenshot shows the Wrike interface for a project titled "University Contest Management System". The left sidebar contains navigation options like "Inbox", "Search", and "Space". The main area displays a table with project tasks, their assignees, status, duration, and due dates. A "Quick start" sidebar on the left offers options to create a project, add a task, or discover a Gantt chart. A chat bubble at the bottom right says "Hey, Hashir! How can I help you get started?".

Name	Assignee	Status	Duration	Start date	Due date	Budget	Impact
1 > Planning	Hashir alisiraj1020@gmail.com	Completed	28d	04/17/2024	05/24/2024	\$5,000	Medium
4 Analysis/Software Requirments	Hashir buriro.hashir@hotmail.com	In review	9d	05/27/2024	06/06/2024	\$1,000	High
5 Design	Hashir abdullahdhani772@gmail.com	In progress	19d	06/07/2024	07/03/2024	\$2,000	High
6 Deployment	alisiraj1020@gmail.com	In progress	25d	07/04/2024	08/07/2024	\$20	High
7 Development	abdullahdhani772@gmail.com	Planned	19d	08/08/2024	09/03/2024	\$30	Medium
8 Maintenance	Hashir buriro.hashir@hotmail.com	Planned	20d	09/05/2024	10/02/2024	\$500	Medium
9 Testing	Hashir alisiraj1020@gmail.com	Planned	14d	10/14/2024	10/31/2024	\$1,000	High

This screenshot shows the "My productivity dashboard" in Wrike. The dashboard is divided into three main sections: "To do this week", "Tasks assigned to me", and "Tasks I completed this week". Each section lists tasks with their status, assignee, and due date. A "Quick start" sidebar on the left offers options to create a project, add a task, or discover a Gantt chart. A chat bubble at the bottom right says "Hey, Hashir! How can I help you get started?".

**To do this week (1)**

- Next week 1
  - Analysis/Software Requirments (In review, Jun 6)

**Tasks assigned to me (4)**

- Next week 1
  - Analysis/Software Requirments (In review, Jun 6)
- After next month 3
  - Design (In progress, Jul 3)
  - Maintenance (Planned, Oct 2)
  - Testing (Planned, Oct 31)
